

## Fire

What makes a fire burn  
is space between the logs,  
a breathing space.  
Too much of a good thing,  
too many logs  
packed too tight  
can douse the flames,  
almost as surely  
as a pail of water would.

So building fires  
requires attention  
to the spaces in between,  
as much as to the wood.

When we are able to build  
open spaces  
in the same way  
we have learned  
to pile on the logs,  
then we come to see how  
it is the fuel, and the absence of the fuel  
together, that makes fire possible.

We only need to lay a log  
lightly from time to time.  
A fire  
grows  
simply because the space is there,  
with openings  
in which the flame  
that knows just how it wants to burn  
can find its way.
